

## BUG & INSECT REPELLENT

### MOZMIST PUMP ADD ON

Everyone loves an Australian summer! The sun, warm weather, lots of outdoor events, dining and entertaining. Unfortunately we humans are not the only ones who love to get out and about in warm weather. Flies, mosquitoes and other flying insects and bugs can ruin the occasion and make the best outdoor venue unpopular. Not to fear MOZmist is here!

Introducing the latest in misting technology, perfect for a bug and insect free summer, the MOZmist system injects minute doses of human friendly, naturally occurring Pyrethrum into the water mist cooling system with no odour or taste to humans and animals.

Your alfresco areas will be bug and insect free and no one will know that it is running. Natural Pyrethrum (Pybo) is the world's oldest and most versatile insecticidal. Pybo pyrethrum is food grade and has full Australian government approval for use against an exceptionally wide range of insects and bugs in almost all situation.

### INSTALLATION & SPECS

The MOZmist system is easily installed on both the Industrial and Commercial high pressure pump modules. It can be added at a later date with only simple alterations to the water plumbing required. The MOZmist has an inbuilt timer which turns the electronic dosing pump on and off as programmed, ensuring the most economical use of the Pybo.

A typical run cycle is for 1ml of Pybo to be added to 1 litre of water for a period of 40 seconds every 2 hours. Times and dosage rate can be easily altered depending on conditions and insect numbers. A further dose will automatically take place every 2 hours that the misting system is switched on. OZmist stocks Pybo in 1 litre bottles.

- ✓ EASY TO INSTALL
- ✓ ADD NOW OR LATER
- ✓ COMMERCIAL & INDUSTRIAL
- ✓ SAFE ON HUMANS & ANIMALS

SAY GOODBYE TO THESE
