

ODOUR SUPPRESSION

DOSING PUMP ADD ON

The **OZmist Dosing Pump Module** connects to our range of high pressure misting pumps to deliver precise amounts of odour suppressant through static misting lines or mist fans.

Water soluble odour suppressants are an extremely effective way to combat odours in a variety of industries. Delivery through a high pressure mist systems ensures an even coverage using the minimum amount of suppressant required. The OZmist dosing module has an inbuilt timer which can be programmed to start and stop the dosing pump for pre set intervals.

During winter the timer can be programmed to start and stop the misting pump unit at pre-set intervals, ensuring the misting system only runs for the minimum amount of time. Supplied in an aluminium lockable cabinet, the module is already plumbed with dual check valves and flexible plumbing connections. The module has space for a 5 litre plastic container to be inserted.

INSTALLATION & SPECS

The dosing module is easily installed on both the industrial and commercial high pressure pump modules and can be added at a later date with only simple alterations to the water plumbing required.

- ✓ EASY TO INSTALL
- ✓ ADD NOW OR LATER
- ✓ COMMERCIAL & INDUSTRIAL
- ✓ SAFE ON HUMANS & ANIMALS
